

ES10

ECLIPSE SERIES

5.1 HOME THEATRE SPEAKER SATELLITE SYSTEM

The Eclipse series is the perfect complement to today's stylish video displays and home theatre systems. Its sculpted black piano finish enclosures look awesome flanking your flat screen television. High tech materials and features, such as Aluminium drivers, bass extension technology ensure superior performance, delivering rich, full-bodied, big speaker sound from beautiful compact design.

Front and Rear Speakers

Stylishly curved enclosures are made from non-resonant medium density fibre board. The curved top breaks up internal standing wave resonance for pure, lifelike sound. The speakers feature a 75mm high performance Aluminium bass driver and a 25mm soft dome tweeter hidden under the grilles. The performance of this speaker will astound you as the mix of high frequency and smooth midrange will give you crisp highs and clear clean voices. This gives you a seamless blend with the matching powered subwoofer. You will experience a full rich natural sound. Stands are supplied to mount front and rear speakers or using the wall socket you can mount these on the wall.

Centre Speaker

The ES 10 centre produces clear speech. You will be able to hear every word at low or high volume. Again it has rounded corners to break up internal standing waves. The ES 10 comes fitted with mounting sockets if you have your TV wall mounted and want to add the centre below it.
