

ES10

ECLIPSE SERIES

5.1 HOME THEATRE SPEAKER SATELLITE SYSTEM

The Eclipse series is the perfect complement to today's stylish video displays and home theatre systems. Its sculpted black piano finish enclosures look awesome flanking your flat screen television. High tech materials and features, such as Aluminium drivers, bass extension technology ensure superior performance, delivering rich, full-bodied, big speaker sound from beautiful compact design.

Front and Rear Speakers

Stylishly curved enclosures are made from non-resonant medium density fibre board. The curved top breaks up internal standing wave resonance for pure, lifelike sound. The speakers feature a 75mm high performance Aluminium bass driver and a 25mm soft dome tweeter hidden under the grilles. The performance of this speaker will astound you as the mix of high frequency and smooth midrange will give you crisp highs and clear clean voices. This gives you a seamless blend with the matching powered subwoofer. You will experience a full rich natural sound. Stands are supplied to mount front and rear speakers or using the wall socket you can mount these on the wall.

Centre Speaker

The ES 10 centre produces clear speech. You will be able to hear every word at low or high volume. Again it has rounded corners to break up internal standing waves. The ES 10 comes fitted with mounting sockets if you have your TV wall mounted and want to add the centre below it.

ES10 ECLIPSE SERIES

5.1 HOME THEATRE SPEAKER SATELLITE SYSTEM

Subwoofer

Building a subwoofer that runs with satellite speakers requires a great deal of research. The ES 1020 has been designed to take over where the satellites finish. You get a great transition as the sub fills in the lower and upper bass. The controls are Volume, this control is set and then your receiver has a subwoofer level that can be adjusted to increase or decrease the volume. Phase, this control lets you place the subwoofer anywhere in the room to fill the room with bass. Crossover, this control increases or decreases the top end of the lower frequency to fill in where the satellite speakers finish. The subwoofer has an auto on off function built in to the power switch.

Accusound 6.1 and 7.1

Building an EX or ES surround sound system for 6.1 or 7.1 (or more) speakers? You can buy surround speakers individually. Ask your dealer.
