

SIGMA SERIES

SA1500

POWERED SUBWOOFER

The Sigma Series SA1500 subwoofer has evolved from our previous models in the range to give you optimum performance. The Subwoofer cabinet is made from Medium Density Fibreboard and is braced inside to stop vibration and handle the strain of low frequencies.

The SA1500 is fitted with a range of controls.

Volume, this is set to a level and then controlled by your receiver.

Crossover, this is set to match your front speaker cut off frequency. Phase is the direction the driver moves when operating, in phase or out of phase. With this control you can place the subwoofer anywhere in the room.

Standby, controls the on and off power to the subwoofer. With the standby in the On position will shut down the subwoofer when the receiver is turned off.

The SA 1500 subwoofer amplifier will deliver 150 watts of real power to the 250mm driver . We have a subwoofer input and output. If you need more bass you can link up another subwoofer from the out of this subwoofer to the second subwoofer.

SA1500 Powered Subwoofer Specifications

Model	Frequency Response	Power Watts RMS	Sensitivity 1w@1m	Rated Impedance	Bass Drivers	Tweeter	Dimensions HxWxD	Weight kg's
