THETA SERIES LOUDSPEAKERS
HOME THEATRE SYSTEMS

TH 200 Fronts

The TH 200 is a floor standing speaker system that has been designed for middle of the road to rock music. The speakers are fitted with 2 x 200mm or 8" drivers in a separate internal compartment. The top section houses a 165mm or 6" midrange and our 25mm soft dome tweeter. By having 2 compartments in this speaker we can control the midrange to ensure clear vocals and good top end response. Again the speaker box is braced side to side to stop any box vibration.

Centre Speaker

The THC is designed for speech and vocals. Many centre speakers have too much bass response. This clouds the speech. We have designed our centre to produce clear speech, by designing the components to be used in a sealed box. You will be able to hear every word at low or high volume. The THC comes fitted with 2 hanging clips to mount on a wall if you have a wall mount plasma or projector.

Rear Surrounds

The THR have been designed to produce rear effects for movies, and also give solid, full range sound for CD's or music DVD's. They come with a single hanging clip for easy wall mount. You can purchase extra single speakers to turn your 5.1 into 6.1 or 7.1 systems. Other companies use a conventional centre speaker for 6.1 as a centre back, but through years of testing, we have found using a rear surround will give you a far better spread of sound across the back of the room. All our speakers are fitted with Gold Binding posts with large holes for good quality cable or Banana plugs.

Powered Subwoofer

The TH300 is the latest version of our award winning series of push pull subwoofers. The TH 300 has a 300 watt RMS built in amplifier with volume, crossover, 0 through to 180 degree phase with a low level input and a low level output so you can connect a second subwoofer. It also has a power, auto, standby switch so you can run in auto or manual mode.

The 250 mm or 10" driver has a rated power of 400 watts for trouble free running as it will not bottom out even with Blu Ray DVD's. It will shake the room and rattle the windows in movies and give you a solid bass in music.

THETA SERIES SPECIFICATIONS

Model	Frequency Response	Power Watts RMS	Sensitivity 1w@1m	Rated Impedance	Bass Drivers	Tweeter	Dimensions HxWxD	Weight kg's
