

OM-850

OMEGA SERIES 150 WATT 6.1 HOME THEATRE SYSTEM

At Accusound we design Home Theatre systems to give you accurate sound for movies and music. It's easy to produce a speaker system just for movies with crashes, bangs and vocal, but when it comes to music, it's a different matter.

To get the correct sound from instruments such as symbols, Violins, Guitars and percussion will take most speaker components to their limit using DVD's. Not so with Accusound as we design all our components to give you the best sound quality even on our mid level models.

The OM-850 is a 6.1 system. 2 fronts, 1 centre, 3 rears and a powered subwoofer. This system is available in 4 colours. Black, Cherry, Chocolate and Silver finish complimenting any

furnishings you have.

Front speakers

The front speakers have 2 x 200mm or 8" gold paper cone drivers and a 25mm or 1" dome tweeter. The connections are banana plug or straight wire connections. This speaker gives you tight bass, clear midrange and crisp highs.

Centre Speaker

The centre speaker delivers good clear vocals for speech and music. The 2 x 125mm or 5" woofers produce mid bass and midrange and the 25mm or 1" tweeter produces clear highs. This box has been fitted with 2 wall hanging clips to mount to the wall if you have a wall mount Plasma or projector. It can also be placed in or on a cabinet.

Rear Surrounds

Surround speakers deliver all the effects from movies, voice and instruments from music. We use 3 rears surrounds across the back to give you a wrap around sound. The 1x 125mm or 5" woofer produces bass and midrange and the 25mm or 1" tweeter produces clear highs. The rear surrounds come fitted with a wall hanging clip on the back of the speaker.

Again with this system we have changed the design to the woofer at the top of the box and the tweeter at the bottom. Over years of listening to systems we have found the highs are missing when the speaker is placed high at the back or sides of the room. With the tweeter at the bottom you will now get all the effects.

Powered Subwoofer

The OM-850 powered subwoofer has a 150 watt double insulated power amplifier and a 250mm or 10"woofer that will give you bass like you have never heard before. No normal speaker can deliver low frequency bass at the volume of a subwoofer. The controls are designed to set and forget. We have a volume, Phase, Crossover control and a power/standby switch. When the system is not being used, the amplifier will automatically turn off to save power and turn back on when you start a movie or music.

Centre and rear speakers are fitted with hanging clips to position your speakers
